

OUR SERVICE

01 LEAN MANAGEMENT SYSTEM TRANSFORMATION CONSULTANCY

At WISE Academy, we support manufacturing organizations in transitioning from traditional management models to a Lean management system that drives operational excellence and sustainable growth. Our Lean transformation approach focuses on two critical dimensions: Physical Transformation and Mindset Transformation. By combining process optimization with leadership and cultural development, we ensure that Lean is not only implemented as tools, but embedded as a long-term management philosophy within the organization.

Through Lean principles and practices, companies can increase productivity, eliminate waste, reduce operational costs, improve quality, and build a culture of continuous improvement that enables them to remain competitive in a rapidly changing global market.

We partner with both FDI and local manufacturing companies to design and implement practical Lean solutions tailored to their production environment.

Physical Transformation

We help organizations redesign their operations to achieve higher efficiency, shorter lead time, and better resource utilization.

- **Brownfield Factory Lean Transformation Consultancy**

Consulting services for existing factories to implement Lean through process optimization, layout improvement, value stream redesign, and waste elimination.

- **New Lean Factory Design Consultancy**

Supporting organizations in designing new factories or production lines based on Lean principles, ensuring optimal flow, scalability, and operational efficiency from the start.

Mindset Transformation

Sustainable Lean transformation requires a strong foundation of leadership capability and organizational culture.

Human Resources Development for Value Stream Structure

We help organizations build Lean-oriented leadership and workforce capabilities aligned with Value Stream Management, enabling teams to drive continuous improvement and operational excellence.

5 PHASES OF LEAN MANAGEMENT SYSTEM TRANSFORMATION ROADMAP

OUR SERVICE

01 LEAN MANAGEMENT SYSTEM TRANSFORMATION CONSULTANCY

LEAN CAPABILITY DEVELOPMENT FRAMEWORK

(Building Lean Mindset, Leadership and Operational Excellence)

Sustainable Lean transformation is not achieved through isolated tools or standalone training. It requires organizations to build an integrated operating system combining process excellence, people capability, and leadership development.

At WISE Academy, we deliver Lean capability development through a structured modular framework inspired by the Toyota Production System (Lean House). This approach enables organizations to improve productivity, quality, lead time, and process efficiency, while building internal capabilities to sustain continuous improvement.

A STRUCTURED YET FLEXIBLE LEAN FRAMEWORK

Our Lean capability development framework is organized into five core modules, representing the key pillars of a high-performing manufacturing system:

1. Foundation & Management System

Establishing operational discipline, transparency, and stability through practices such as **5S, Visual Management, Standardized Work, and Daily Management Systems.**

2. Quality Excellence

Building quality at the source by applying **problem-solving methodologies, Poka-Yoke, and Total Quality Management (TQM)** to reduce defects and improve process consistency.

3. Productivity & Flow Optimization

Enhancing production efficiency and flow through **Value Stream Mapping (VSM), line balancing, pull systems, Kanban, and SMED** to reduce lead time and eliminate waste.

4. Equipment & Reliability

Improving equipment performance and operational stability through **Total Productive Maintenance (TPM) and overall equipment effectiveness (OEE) improvement.**

5. People & Lean Leadership

Developing Lean mindset and leadership capabilities to enable teams to drive continuous improvement, solve problems systematically, and sustain transformation efforts such as **Hoshin Kanri, A3, Catch-ball, Leadership Standard Work...**

WISE Academy goes beyond Lean tools and standalone training by building internal capabilities through **Lean mindset, leadership development, and real shopfloor application.**

We **tailor** each engagement based **on operational gaps** in productivity, quality, and lead time, combining the right Lean modules and tools.

Our training-coaching-implementation approach ensures **measurable improvements** while embedding Lean as a sustainable operating system, not a short-term initiative.

05 STAGES

LEAN TRANSFORMATION ROADMAP

01

Stage 1: Explore / Introduction to Lean (Flexible, depending on the organization's level of commitment)

Objective: Leadership develops a correct understanding of Lean, clarifies the reasons for adoption, and enables their teams to be exposed to Lean through initiatives aligned with the organization's strategy.

Outcome: Leadership is able to assess the current stage of the organization in its Lean journey.

02

Stage 2: Build the Lean Foundation (6 – 9 months)

Objective: Leadership facilitates the development of fundamental capabilities for the operations team and enables real-world experimentation/implementation to stimulate innovation, clarify the current state, and shape the organization's vision. Managers are trained to shift their mindset in operations management (production/business) and to pilot Lean tools to achieve quick wins.

Outcome: 75% focus on building foundational knowledge and 25% on practical implementation capability.

03

Stage 3: Scale Lean Across the Organization (9 – 18 months)

Objective: Replicate best Lean practices across the organization and deliver clear business results through measurable operational performance metrics.

Outcome: 25% focus on advanced knowledge and 75% on scaling, standardization, and continuous improvement efforts.

04

Stage 4: Embed Lean into Daily Operations (12 – 18 months)

Objective: Integrate Lean efforts into daily operations across the organization and strengthen the management system to effectively identify abnormalities and control processes, people, and issues.

Outcome: Significant improvement in operational team capability and the organization's ability to self-manage and sustain performance.

05

Stage 5: Establish a Culture of Continuous Improvement (Ongoing - no fixed timeline)

Objective: Lean principles and practices become embedded in the organizational culture, enabling continuous improvement to consistently meet and exceed customer needs.

Outcome: Lean efforts and culture become guiding principles for all strategic activities, reflected in performance results across safety, quality, delivery, cost, employee engagement, and brand value.

Scan the QR code to quickly assess the organization's Lean maturity level across five development stages: Awareness → Foundation → Expansion → Integration → Culture.

10 CRITERIAS

OF A CERTIFIED LEAN LINE

01 Continuous Flow

Integrate upstream and downstream processes within a unified value stream to enable smooth material and information flow, reduce inventory buffers, and improve coordination across operations.

06 TPM System

Maximize equipment effectiveness through proactive and autonomous maintenance, reducing downtime, improving reliability, and enhancing productivity and safety.

02 Pull System

Implement pull-based control (Kanban, supermarket, FIFO) to align production with demand, minimize WIP, stabilize operations, and eliminate overproduction across disconnected processes.

07 Line Balancing

Optimize workload distribution using takt time and Yamazumi to eliminate bottlenecks, improve flow efficiency, and maximize labor and machine utilization.

03 Value Stream Management

Manage operations end-to-end through value streams with clear ownership, ensuring alignment to customer demand, production plans, and cross-functional accountability.

08 In-Station Quality

Ensure quality is built into each process step through operator ownership, real-time issue signaling (Andon), and immediate problem resolution.

04 Workplace Management

Establish a disciplined, visual, and standardized workplace using 6S principles to improve efficiency, reduce waste, and ensure operational transparency.

09 Problem Solving - PDCA

Apply structured PDCA methodology to identify root causes, implement corrective actions, and sustain improvements through systematic problem-solving practices.

05 Management by KPIs

Deploy Lean KPIs to monitor performance, drive accountability, and enable data-driven continuous improvement at line and factory levels.

10 Standardized Work

Define and implement consistent work standards to reduce variation, ensure stable output, and provide a foundation for continuous improvement and training.
