WORKPLACE ORGANIZATION METHODOLOGY

S1. SORT

Sort necessary and unnecessary things by items and material group. Then remove the unnecessary items and scraps from workplace.

S6. SAFETY

Develop a process to evaluate the safety of machines and work areas, deploy countermeasures to eliminate, limit or warn during operation and maintenance.

S2. SET IN ORDER

Rearrange necessary items according to a scientific method, to support management, ease of use, inventory management and ergonomics.

S5. SUSTAIN

Develop 6S checklist, check regularly with the participation of all members in the organization so that 6S becomes a part of the corporate culture.

S3. SHINE

Identify and prevent sources of contamination, damages, and hard-to-reach areas. Develop standards for cleaning and inspecting workplace.

S4. STANDARDIZE

Develop and visualize standards of implementation and sustain S1/S2/S3 for each work area. Deploy and maintain enforcement. Standards should be improved continuously.

5S - Common Misconceptions

5S only means cleaning

5S is not simply about cleaning the workplace. It is a system for creating a clean, organized, safe, and efficient working environment that supports productivity and continuous improvement.

5S is the responsibility of workers only

5S is everyone's responsibility – from operators to managers and leaders. Sustainable 5S requires commitment, participation, and support from all levels of the organization.

5S wastes time and reduces productivity

5S actually saves time by reducing searching, waiting, unnecessary movement, and mistakes. A well-organized workplace improves efficiency, quality, and safety.

5S is a one-time activity

5S is everyone's responsibility – from operators to managers and leaders. Sustainable 5S requires commitment, participation, and support from all levels of the organization.

5S only applies to production areas

5S can be applied everywhere – offices, warehouses, production lines, meeting rooms, machines, and even digital workplaces. Any environment can benefit from better organization and standardization.

One training session is enough to sustain 5S

5S cannot be sustained through training alone. It requires continuous coaching, reminders, feedback, communication, and daily practice until it becomes a habit and part of the workplace culture.

5S is only about audits, inspections, and taking photos

If 5S is done only for reporting or inspection purposes, people will eventually lose motivation. The true purpose of 5S is to create real value, improve the workplace, and make work easier, safer, and more efficient.

ABOUT THE PROGRAM

The 5S, Safety, and Visual Management Program helps organizations build a safer, more organized, and efficient workplace through practical Lean workplace management practices. The program combines classroom learning with hands-on implementation activities to strengthen workplace organization, visual control, safety awareness, and operational discipline. Participants will apply the concepts directly at pilot areas through workplace observation, team activities, and practical improvement exercises to encourage sustainable workplace improvement and continuous improvement culture.

LEARNING METHODOLOGY

- Interactive classroom sessions and discussions
- Hands-on implementation at pilot areas
- Workplace observation and Gemba activities
- Group exercises and team-based activities
- On-site coaching and facilitator guidance
- Review, feedback, and action planning sessions

RECOMMENDED PARTICIPANTS

- Production Supervisors and Line Leaders
- Operators and Production Staff
- Maintenance and Engineering Personnel
- Warehouse and Logistics Teams
- Safety Representatives
- Lean / Continuous Improvement Teams
- Department Managers and Functional Leaders

TRAINING DURATION: 3 DAYS

The program content and implementation approach can be customized to align with the client's operational needs, industry context, and organizational objectives.

OBJECTIVE

- ✓ Build participant understanding of 5S, Safety, and Visual Management principles, including their objectives, methodology, and operational benefits.
- ✓ Develop practical capability in applying workplace organization and visual management practices within a pilot production area.
- ✓ Enable participants to recognize the impact of 5S and Safety implementation on operational efficiency, productivity, workplace visibility, and employee safety.
- ✓ Strengthen awareness of continuous improvement culture and encourage proactive workplace improvement initiatives.
- ✓ Build long-term commitment and ownership toward sustaining workplace organization, safety, and operational discipline.

5S, SAFETY, AND VISUAL MANAGEMENT

No.	Content	Activity	Objective
1	Program Kick-off & Introduction to 6S Methodology	Opening session, participant alignment, and team formation	Establish a common understanding of the 6S methodology and align participants on implementation objectives
2	Sort (S1) – Workplace Organization & Elimination of Unnecessary Items	Hands-on S1 implementation coaching at the pilot area	Identify and remove non-essential items to improve workspace efficiency, visibility, and utilization
3	Set in Order (S2) – Visual Organization & Workplace Arrangement	Practical S2 implementation and visual workplace setup	Create organized, accessible, and visually controlled work areas to improve operational flow and reduce searching time
4	Shine (S3) – Cleaning, Inspection & Equipment Care	Workplace cleaning, inspection, and abnormality identification exercise	Improve workplace condition while strengthening awareness of equipment abnormalities, contamination sources, and maintenance needs
5	Standardization (S4) – Visual Standards & Operational Consistency	Develop visual controls, standards, and workplace management practices	Establish standardized methods to sustain workplace organization and operational discipline
6	Workplace Review & Reflection Session	Team review, before–after comparison, and facilitated discussion	Reinforce key learning points and identify further improvement opportunities for sustainable 6S implementation

5S, SAFETY, AND VISUAL MANAGEMENT

No.	Content	Activity	Objective
1	Standardization (S4) & Visual Management	Standardization (S4) and Visual Management implementation coaching at the pilot area	Establish sustainable workplace standards, clarify ownership responsibilities, and strengthen operational discipline through visual management practices
2	Program Wrap-up & Action Planning	Knowledge review, quiz session, and follow-up action assignment	Reinforce key learning points, evaluate participant understanding, and define post-training implementation actions
3	4S Review Session	Warm-up discussion, recap quiz, and team alignment	Reinforce understanding of 4S concepts and prepare participants for practical implementation activities
4	S1–S4 Practical Implementation Coaching at Key Operational Areas	Gemba-based coaching and shopfloor implementation by group	Apply 4S principles in real workplace conditions to improve organization, visual control, and operational efficiency across key functional areas
5	Daily Review & Follow-up Planning	Review practice outcomes, quiz session, and follow-up task assignment	Consolidate learning results, identify improvement opportunities, and define next-step implementation actions

5S, SAFETY, AND VISUAL MANAGEMENT

No.	Content	Activity	Objective
1	Warm-up & Review of S1-S4 Implementation	Interactive review session, quiz activity, and group discussion	Reinforce understanding of previous 5S practices and align participants for the Sustain phase
2	Sustain (S5) Principles & Governance System	Facilitated explanation and implementation coaching	Understand the objectives, governance structure, and sustainability approach of S5
3	5S Audit System & Performance Management	Audit planning workshop and checklist development	Establish systematic monitoring and review mechanisms to sustain 5S performance
4	Roles, Responsibilities & 5S Deployment Planning	Responsibility mapping and rollout planning exercise	Clarify ownership and prepare for organization-wide 5S deployment
5	Workplace Safety Fundamentals & Risk Assessment	Safety coaching and workplace risk assessment activities	Build awareness of workplace hazards and strengthen risk identification capability
6	Machine Safety, PPE & Hazardous Material Management	Practical safety inspection and compliance review	Improve understanding of machine safety, PPE requirements, and hazardous material control
7	Safety Culture & Accountability	Leadership discussion and responsibility alignment	Promote proactive safety culture and strengthen accountability for workplace safety
8	Final Presentation, Feedback & Action Planning	Team presentation, final assessment, feedback session, and action planning	Consolidate learning outcomes and define sustainability actions for post-training implementation
