Change?

Many companies continue to encounter:

- Slow delivery of products and services
- Constant customer complaints
- Inconsistent quality
- Poor customer service
- High costs and prices
- Poor internal communication

THESE COMPANIES ARE DESTINED TO VANISH!

**"It's not the big that eat the small...
it's the fast that eat the slow."**

_Jason Jennings

Lean: Transforming Operational Challenges into Sustainable Performance

From Hidden Waste to Measurable Business Results

Lean is more than a productivity improvement methodology—it is a systematic operational philosophy designed to help organizations create greater value with fewer resources, stronger process discipline, and continuous improvement at every level of the business.

For labor-intensive industries such as garment, footwear, and leather goods manufacturing, Lean provides a practical and proven framework to address the root causes of inefficiency, operational instability, and margin erosion.

Through Lean implementation, organizations can:

- Eliminate Non-Value-Added Activities
- Identify and systematically remove operational waste—including waiting time, unnecessary motion, overproduction, excess inventory, rework, transportation inefficiencies, and underutilized human potential—freeing up capacity and improving workflow efficiency.
- Standardize Processes for Consistency and Control
- Create clear, repeatable, and measurable work standards that reduce variation, strengthen execution discipline, and ensure operational consistency across teams, departments, and production lines.
- Build Sustainable Productivity Improvement
- Move beyond short-term productivity pushes by embedding continuous improvement capabilities into daily operations—enabling teams to solve problems faster, improve performance continuously, and sustain gains over time.
- Increase Operational Agility
- Improve responsiveness to customer demand fluctuations, shorten internal decision cycles, and create a more flexible operating model capable of adapting to market changes.
- Develop a Culture of Continuous Improvement
- Empower employees at every level—from operators to managers—to identify problems, propose solutions, and actively contribute to operational excellence.

Typical Operational Improvements Achieved Through Lean

Illustrative performance outcomes observed across manufacturing environments

✓ **20–40% REDUCTION IN PROCESS LEAD TIME**

Through streamlined workflows, reduced waiting time, and better production flow management.

✓ **15–30% INCREASE IN PRODUCTIVITY**

By improving labor utilization, balancing workloads, and reducing operational friction.

✓ **10–25% REDUCTION IN REWORK AND DEFECTS**

Through stronger process control, standardized work methods, and root-cause problem solving.

✓ **15–35% REDUCTION IN INVENTORY AND WORK-IN-PROGRESS (WIP)**

By improving material flow visibility and synchronizing production activities.

✓ **IMPROVED ON-TIME DELIVERY PERFORMANCE**

Creating stronger customer confidence and improving long-term competitiveness.

Highlight box:

Lean does not simply improve processes—it transforms the way organizations operate, compete, and grow.

HOW DO GLOBAL BRANDS BEGIN THEIR LEAN JOURNEY?

IT'S ALL ABOUT STRATEGY

WHAT SHOULD THE TRANSFORMATION STRATEGY LOOK LIKE?

A company may start with a few improvement projects as a meaningful “warm-up” to build momentum for change.

However, a scientific and structured approach aligned with international standards must be driven by a clear strategy and long-term vision. Strategic objectives should be defined and guided by top management, not initiated by isolated project teams.

It is important to keep in mind the first principle of the 14 Lean management principles:

“Base management decisions on a long-term philosophy, even at the expense of short-term financial goals.”

– Toyota Production System

THE LEAN TRANSFORMATION HOUSE MODEL

05 PHASES OF LEAN TRANSFORMATION ROADMAP

STAGE 1

Explore / Introduction to Lean (Flexible, depending on the organization's level of commitment)

Objective: Leadership develops a correct understanding of Lean, clarifies the reasons for adoption, and enables their teams to be exposed to Lean through initiatives aligned with the organization's strategy.

Outcome: Leadership is able to assess the current stage of the organization in its Lean journey.

STAGE 2

Build the Lean Foundation (6 – 9 months)

Objective: Leadership facilitates the development of fundamental capabilities for the operations team and enables real-world experimentation/implementation to stimulate innovation, clarify the current state, and shape the organization's vision.

Managers are trained to shift their mindset in operations management (production/business) and to pilot Lean tools to achieve quick wins.

Outcome: 75% focus on building foundational knowledge and 25% on practical implementation capability.

STAGE 3

Scale Lean Across the Organization (9 – 18 months)

Objective: Replicate best Lean practices across the organization and deliver clear business results through measurable operational performance metrics.

Outcome: 25% focus on advanced knowledge and 75% on scaling, standardization, and continuous improvement efforts.

STAGE 4

Embed Lean into Daily Operations (12 – 18 months)

Objective: Integrate Lean efforts into daily operations across the organization and strengthen the management system to effectively identify abnormalities and control processes, people, and issues.

Outcome: Significant improvement in operational team capability and the organization's ability to self-manage and sustain performance.

STAGE 5

Establish a Culture of Continuous Improvement (Ongoing - no fixed timeline)

Objective: Lean principles and practices become embedded in the organizational culture, enabling continuous improvement to consistently meet and exceed customer needs.

Outcome: Lean efforts and culture become guiding principles for all strategic activities, reflected in performance results across safety, quality, delivery, cost, employee engagement, and brand value.

Scan the QR code to quickly assess the organization's Lean maturity level across five development stages: Awareness → Foundation → Expansion → Integration → Culture.

STRATEGY FOR TRANSFORMING THE LEAN HOUSE MODEL INTO LEAN IMPLEMENTATION STAGES

LEAN AWARENESS & LEADERSHIP ALIGNMENT

OBJECTIVES

- Enable leadership to develop a correct understanding of Lean (not just tools, but an operating system)
- Clarify the “Why Lean” in alignment with business strategy (cost, quality, delivery, growth, etc.)
- Build alignment and commitment across the Leadership Team
- Identify the current operational state and gaps toward Operational Excellence
- Define a Lean Vision and overall transformation direction

LEARNING OUTCOMES

1. Lean Mindset for Leadership: Develop a correct understanding of Lean and the role of leadership in transformation
2. System-Level Problem Identification: Identify waste and system-level issues (Muda, Mura, Muri)
3. Current State Assessment: Assess current operations and Lean maturity level
4. Define “Why Lean”: Clarify the rationale for Lean aligned with strategy and KPIs
5. Lean Vision & Roadmap: Build the transformation vision and roadmap
6. Leadership Alignment: Align leadership and secure commitment for execution

STABILIZE PRODUCTION & BUILD FOUNDATION

OBJECTIVES

- Establish basic operational stability (reduce variability in processes)
- Build foundational Lean capabilities across the workforce
- Standardize key processes to ensure consistency and repeatability
- Identify and eliminate major sources of waste and inefficiency
- Improve equipment reliability and workplace organization
- Create a solid foundation for scaling Lean in later stages

TRAINING MODULES

1. 6S & Visual Management: Build a visual and disciplined workplace
2. Waste Identification & Elimination: Identify and eliminate waste (7 wastes)
3. Standard Work: Standardize processes to reduce variation
4. Total Productive Maintenance (TPM): Improve equipment reliability and performance
5. Training & Skill Development (TWI, Multi-skill): Develop workforce capability and on-the-job training
6. Safety & Basic Stability: Ensure safety and operational stability

LEAN DEPLOYMENT & BUSINESS IMPACT

OBJECTIVES

- Scale Lean practices across key functions and processes
- Deliver measurable business impact (cost, quality, delivery, productivity)
- Focus on end-to-end value streams instead of isolated improvements
- Strengthen capability in project-based improvement and problem solving
- Align Lean initiatives with strategic KPIs and business priorities

TRAINING MODULES

1. Value Stream Mapping (VSM): Analyze and redesign end-to-end processes
2. Flow & Layout Optimization: Improve process flow and eliminate bottlenecks
3. Pull System & Kanban: Control production based on actual demand
4. Heijunka (Production Leveling): Balance workload and reduce variability
5. Lean Project Management: Execute improvement projects linked to business KPIs
6. Data Analysis & Problem Solving: Use data to identify root causes and drive improvements

DAILY MANAGEMENT & BUILT-IN QUALITY

OBJECTIVES

- Embed Lean into daily operations and management routines
- Ensure consistent execution through standardized management systems
- Enable real-time visibility and control of performance
- Strengthen capability in problem solving at all levels
- Transition Lean from projects into the way of working

TRAINING MODULES

1. Daily Management System (DMS): Establish structured daily/weekly review and control routines
2. Visual Management & KPI Control: Make performance visible and actionable
3. Standard Work for Leaders: Define and sustain leadership routines and responsibilities
4. Problem Solving & Root Cause Analysis: Systematically identify and eliminate root causes
5. Built-in Quality (Jidoka, Poka-Yoke, Andon): Detect and prevent defects at the source
6. Performance Review & Escalation System: Ensure timely response and accountability across levels

LEAN CULTURE & CONTINUOUS IMPROVEMENT

OBJECTIVES

- Establish a culture of continuous improvement across the organization
- Enable employees at all levels to proactively identify and solve problems
- Sustain Lean as a self-driven operating system, not a program
- Continuously improve performance to meet and exceed customer expectations
- Strengthen leadership capability in coaching and developing people

TRAINING MODULES

1. Kaizen System (Continuous Improvement System): Enable daily, small-step improvements across the organization
2. Suggestion System & Employee Engagement: Encourage and capture improvement ideas from all employees
3. Coaching & People Development: Develop leaders as coaches to sustain Lean behaviors
4. Leader Standard Work & Gemba Walk: Reinforce leadership presence and continuous improvement at the workplace
5. Learning Organization & Knowledge Sharing: Promote continuous learning and best practice sharing
6. Recognition & Motivation System: Reinforce desired behaviors and sustain engagement

10 CRITERIAS OF A CERTIFIED LEAN LINE

Continuous Flow

Integrate upstream and downstream processes within a unified value stream to enable smooth material and information flow, reduce inventory buffers, and improve coordination across operations.

TPM System

Maximize equipment effectiveness through proactive and autonomous maintenance, reducing downtime, improving reliability, and enhancing productivity and safety.

Pull System

Implement pull-based control (Kanban, supermarket, FIFO) to align production with demand, minimize WIP, stabilize operations, and eliminate overproduction across disconnected processes.

Line Balancing

Optimize workload distribution using takt time and Yamazumi to eliminate bottlenecks, improve flow efficiency, and maximize labor and machine utilization.

Value Stream Management

Manage operations end-to-end through value streams with clear ownership, ensuring alignment to customer demand, production plans, and cross-functional accountability.

In-Station Quality

Ensure quality is built into each process step through operator ownership, real-time issue signaling (Andon), and immediate problem resolution.

Workplace Management

Establish a disciplined, visual, and standardized workplace using 6S principles to improve efficiency, reduce waste, and ensure operational transparency.

Problem Solving - PDCA

Apply structured PDCA methodology to identify root causes, implement corrective actions, and sustain improvements through systematic problem-solving practices.

Management by KPIs

Deploy Lean KPIs to monitor performance, drive accountability, and enable data-driven continuous improvement at line and factory levels.

Standardized Work

Define and implement consistent work standards to reduce variation, ensure stable output, and provide a foundation for continuous improvement and training.
